

## Eleven Plus Maths How To Do - Subtraction of Decimals

You set the sum out just as you did for addition, first putting in the decimal points and then filling in the figures.

Example: 26.7 - 9.38

.            26.70    (The nought we have put in the top line has  
.            9.38    not changed the value of the number, but it  
.            .        helps to keep the figures in their correct  
                 places).
